

NJB Statistical Consulting

Capabilities Statement

Who We Are

NJB Statistical Consulting is an informatics company that provides data services to local, state and federal public and private sector organizations. We provide a full range of data services that includes data collection, storage, management and analysis. We offer a professional, proactive approach to problem-solving and a commitment to produce customized, value-added solutions to your data needs.

The NJB Statistical Consulting Advantage

Our highly skilled staff is able to meet your data needs by bridging the gap between information technology innovations and public health objectives because of extensive experience in both industries. With over 25 years of combined experience, our staff is highly trained in all aspects of data processing, from beginning (data collection and warehousing) to ending (analysis and reporting).

Our services include-

- Scientific literature reviews
- Development of logic models
- Study/survey design
- Development of data collection instruments
- Data collection (qualitative/quantitative)
- Data management
- Quality assurance
- Statistical programming
- Epidemiologic or statistical analysis
- Report customization
- System requirements gathering
- System requirements development
- Software customization
- Database/system design
- Database administration and security
- Data storage and management
- Data migration and integration
- Data modeling and simulation
- System testing
- Database reporting
- User support
- Modernization/updating of legacy systems

The current need for public health informatics arises from new pressures on the public health system in the form of more virulent, rapidly spreading infections, bioterrorism threats, etc.; decreased public health funding; emerging health issues that require seamless electronic exchanges of information; and dramatic improvements in information technology. The need to transmit or collect quality data, unify disparate datasets, create a sound data infrastructure and disseminate data quickly will increase as the need for timely, accurate information from a variety of sources is required to inform public health action.

NJB Statistical Consulting

Capabilities Statement

Positive Results

NJB Statistical Consulting possesses a customer-focused approach and understands the challenges that governmental agencies face. Our success is a direct result of our ability to work collaboratively with clients from different functional areas and with varying levels of understanding; responsiveness to clients' goals; and a history of excellent performance. In addition to state and federal governmental experience, our staff has consulting experience at private sector IT companies which results in a strategic mix of information technology innovations and customer objectives. NJB Statistical Consulting can meet your data needs by ensuring that data is transformed into useable information.

NJB Statistical Consulting staff understands the importance of leveraging new and existing data sources to contain operational costs and achieve ever-changing goals. We take pride in our technical competence and are sensitive to the unique objectives and constraints of governmental agencies. Our primary goal is to deliver value-added solutions and produce high-quality results that consistently meet or exceed our clients' expectations.
